

**Chromatic Harmonica players -
Your problem when it is cold ...**

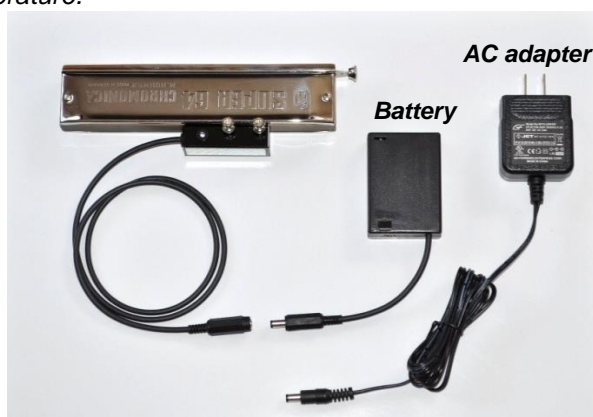

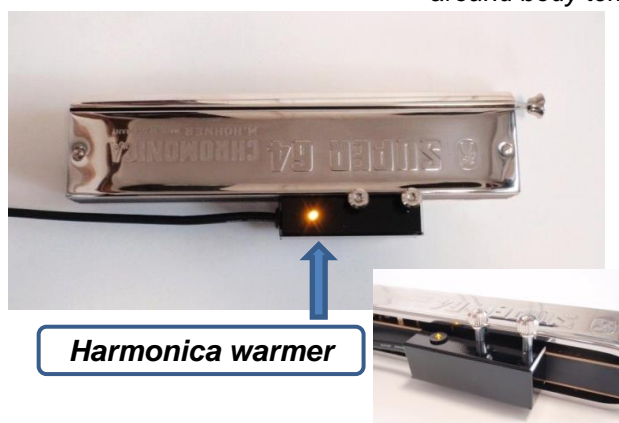

Electric heater type

Harmonica Warmer

Japan Patent No. 5294519
PCT international application filed

This is a device to prevent condensation by heating the reed plate to a temperature around body temperature.

[Merits of use]

- 1. There is no valve sticking**
 - Even if sticking occurs, it is resolved within 10 to 20 minutes of attachment.
 - It becomes possible to perform outdoors in cold weather.
- 2. The reeds and valves are heated, so the tone quality is improved.**
- 3. There is no condensation on the slide lever, so it is dry and hygienic.**
- 4. The frequency of valve replacement is reduced.**

Condensation

disappears !!

[Features]

- Can be easily fitted to the bottom of the harmonica And Performable with the device fitted.
- The compact size means there is no effect on the performance or sound.
- Using the AC adapter makes long performances possible.
- When there is no power supply, the battery makes performance possible for approx. 1 hour.
- Can be used for any manufacturer or model. (Use is not possible on some models due to the structure.)

[Price] 16,000 yen (excluding consumption tax and postage costs)
